EZ ROLL CORNER RADIUS GUIDE

ACTUAL-SIZE PRINTABLE TEMPLATE - 1" THROUGH 8" RADIUS

PRINT AT 100% / ACTUAL SIZE - DO NOT SELECT 'FIT TO PAGE'

After printing, verify the 2-inch calibration line below with a ruler before using the template.

HOW TO USE

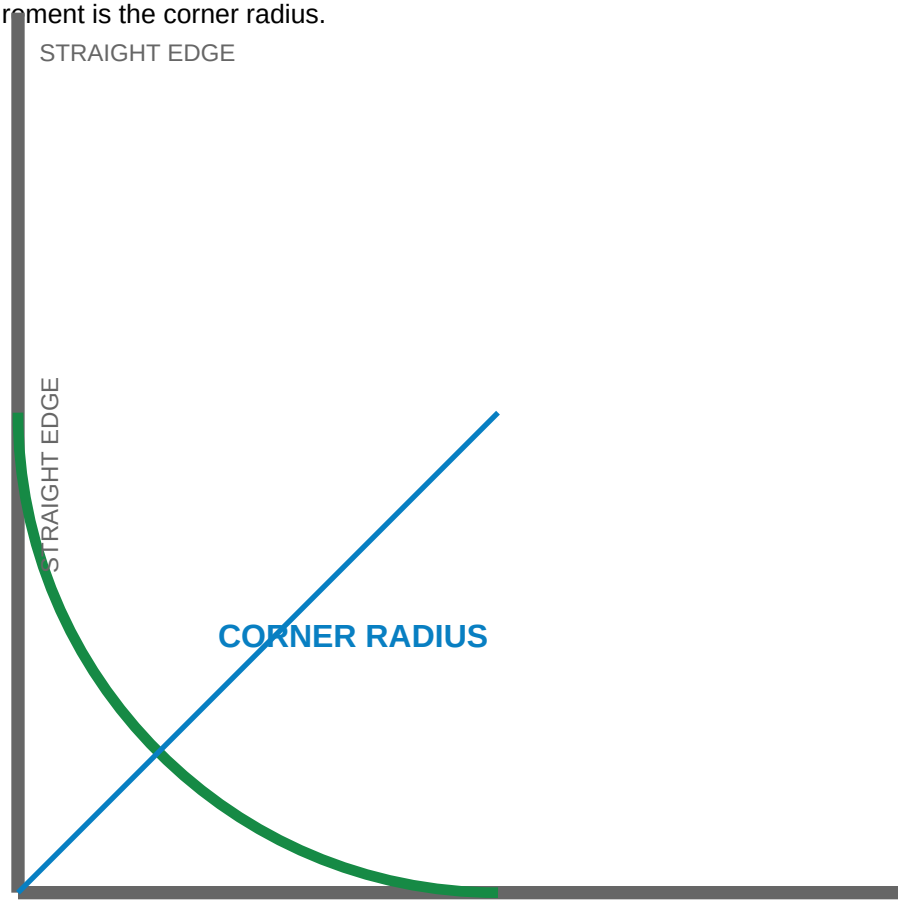

Place the printed guide over the spa corner.
The curve that most closely follows the spa corner is your radius.

HOW TO CHECK LARGER CORNER RADII

For 9", 10", 11", 12" and larger corners

Simple Straight-Edge Method

1. Place one straight edge along each straight side of the hot tub corner.
2. Extend the straight edges until they would meet at an imaginary 90-degree corner.
3. Measure from that imaginary corner to the point where the rounded corner begins.
4. That measurement is the corner radius.

MEASURING TIP

If your corner falls between two sizes, record the closest measurement and send EZ Roll a clear photo of the corner with a tape measure visible so the radius can be confirmed.

Always measure the hot tub itself - never the old cover.
